

Calculate the average deposit in Ethereum for each unique player.  
Group these averages into meaningful categories.  
Create a histogram showing the distribution of players across these categories.

The histogram illustrates the distribution of players in various average deposit categories, measured in Ethereum (ETH). Here's a breakdown of the number of players in each category:

Less than 0.01 ETH: 2 players

0.01 to 0.1 ETH: 2762 players

0.1 to 0.5 ETH: 318 players

0.5 to 1 ETH: 31 players

1 to 5 ETH: 24 players

5 to 10 ETH: 0 players

10 to 50 ETH: 0 players

50 to 100 ETH: 0 players

More than 100 ETH: 0 players

The majority of players are in the '0.01 to 0.1 ETH' category, indicating that lower deposit ranges are more popular among the players of this OnChain gambling game. Categories above 5 ETH have no players.

Quartil (25%): 0.01 ETH

Quartil (Median, 50%): 0.02 ETH

Quartil (75%): 0.05 ETH

Varianz: 0.0443 ETH<sup>2</sup>

Diese Werte zeigen, dass die Hälfte der Spieler im Durchschnitt zwischen 0.01 und 0.05 ETH einzahlt, mit einer beträchtlichen Streuung in den Einzahlungsbeträgen, wie durch die Varianz angezeigt wird.
